

# Biodiversity Policies

30.07.24

Rike Mühlhaus

# Background

Using the Policy Database from Wuepper (2024)<sup>1</sup>, I extracted the policies that dealt with biodiversity. Since nearly all biodiversity policies were legislative, the goal was to find more aspects to characterize these policies. To do so, I first performed a Text Clustering based on word abundances in the provided abstracts of the policies.

Then, on a clearly distinguishable cluster, a group of policies dealing with environmental protection was selected, to perform a more guided clustering, to assign a goal, an instrument and an affected group to the policies.

The Clustering Processes are described in the Jupyter Notebooks:

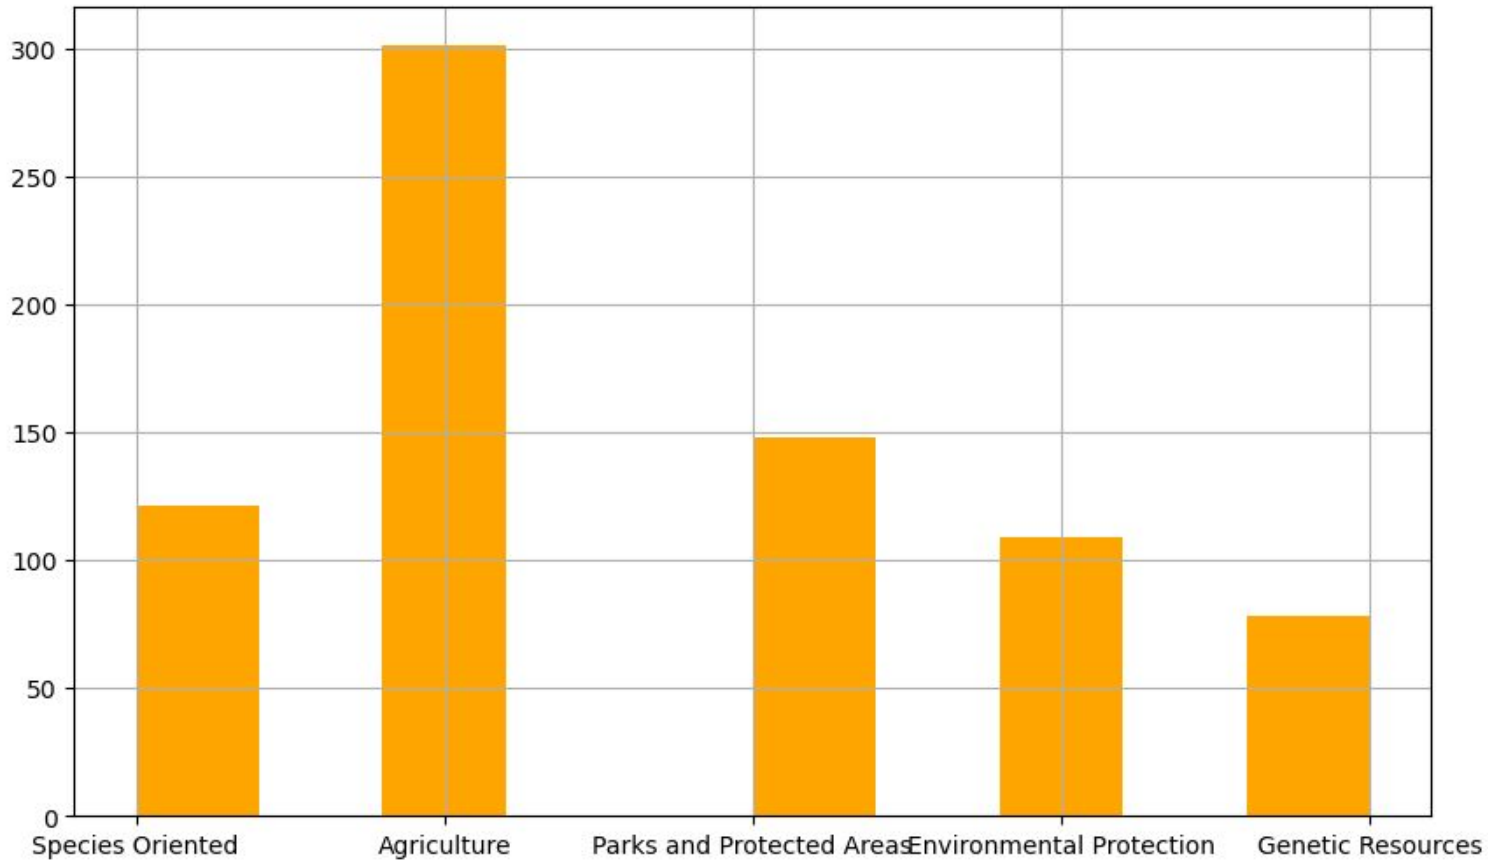

[Unguided thematically clustering of biodiversity policies](#)

[Guided clustering of the environmental protection policies](#)

1: Wuepper, D., Wiebecke, I., Meier, L., Vogelsanger, S., Bramato, S., Fürholz, A., & Finger, R. (2024). Agri-environmental policies from 1960 to 2022. *Nature Food*, 5(4), 323-331.

Thematic  
Clusters based  
on Word  
Abundance.

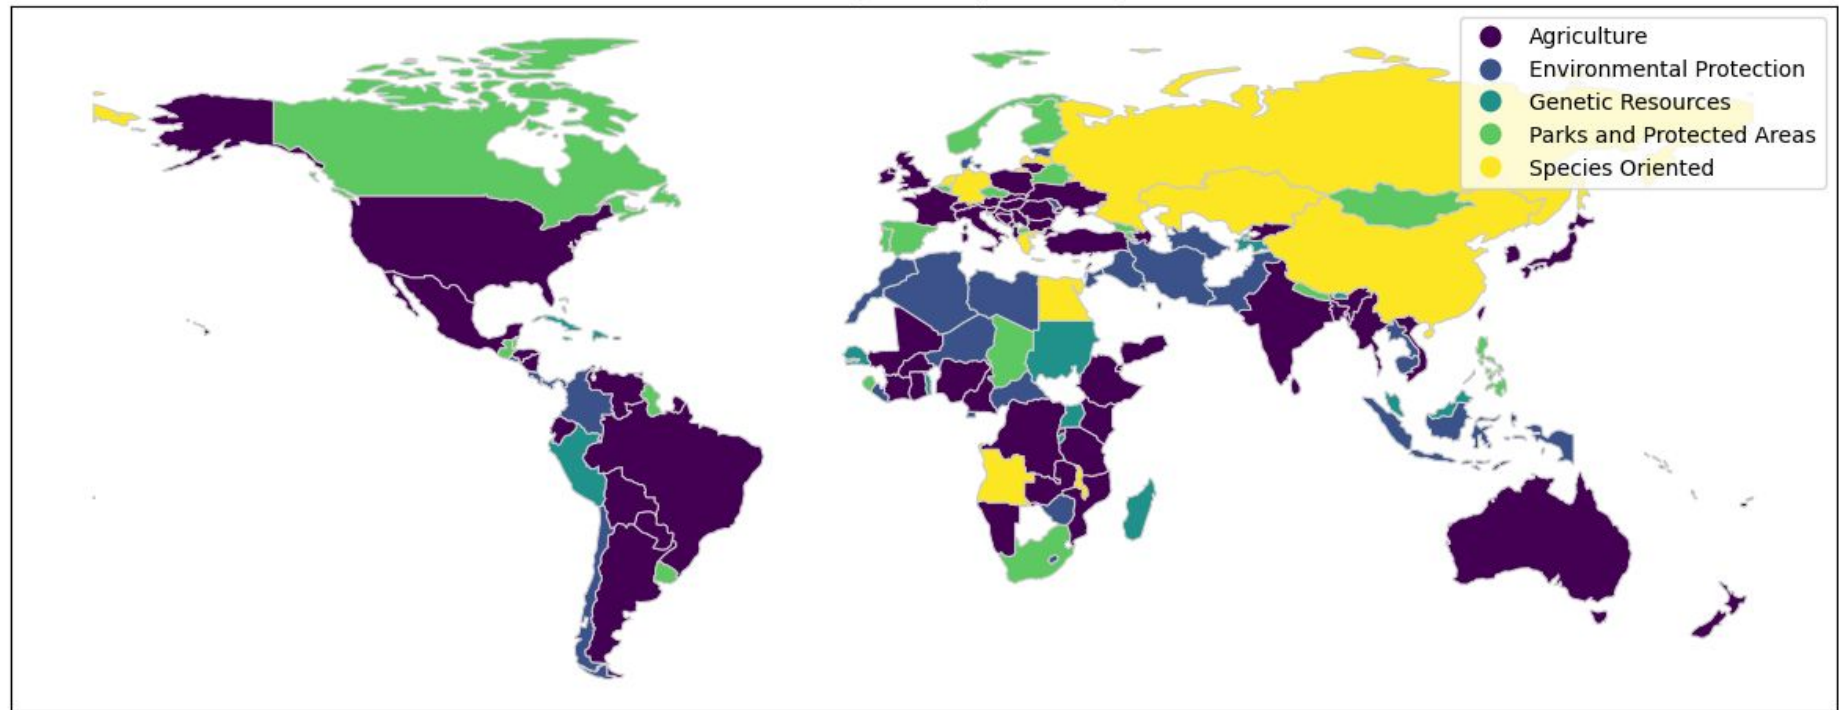

Number of  
Policies per  
Cluster.

Number of Clusters per Year with Proportions of Cluster Names

Number of Policies per Cluster per Year.

Dominating Cluster per Country

# Instrument: Abundance

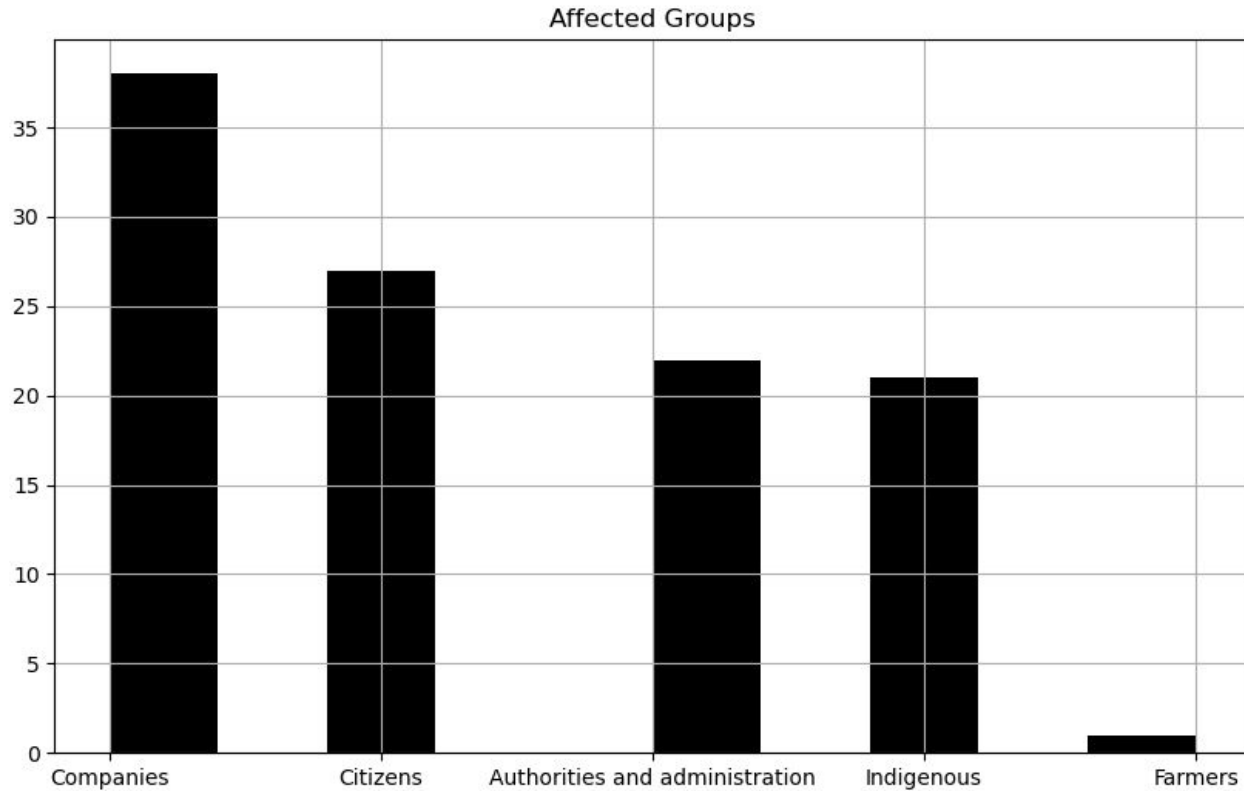

# Instrument: Development over Time

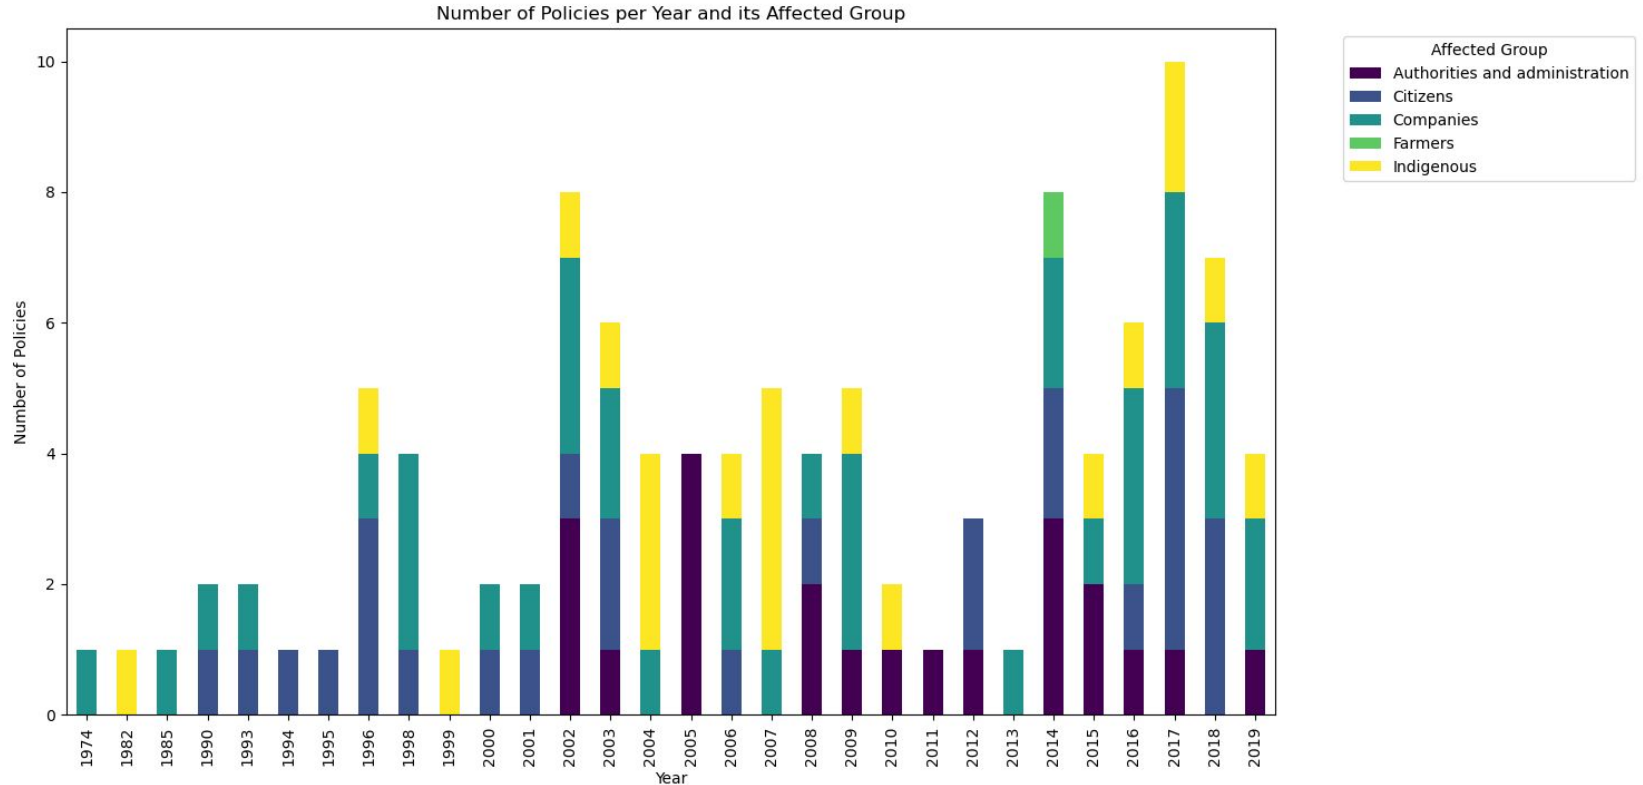

# Instrument: Dominating Goal per Country

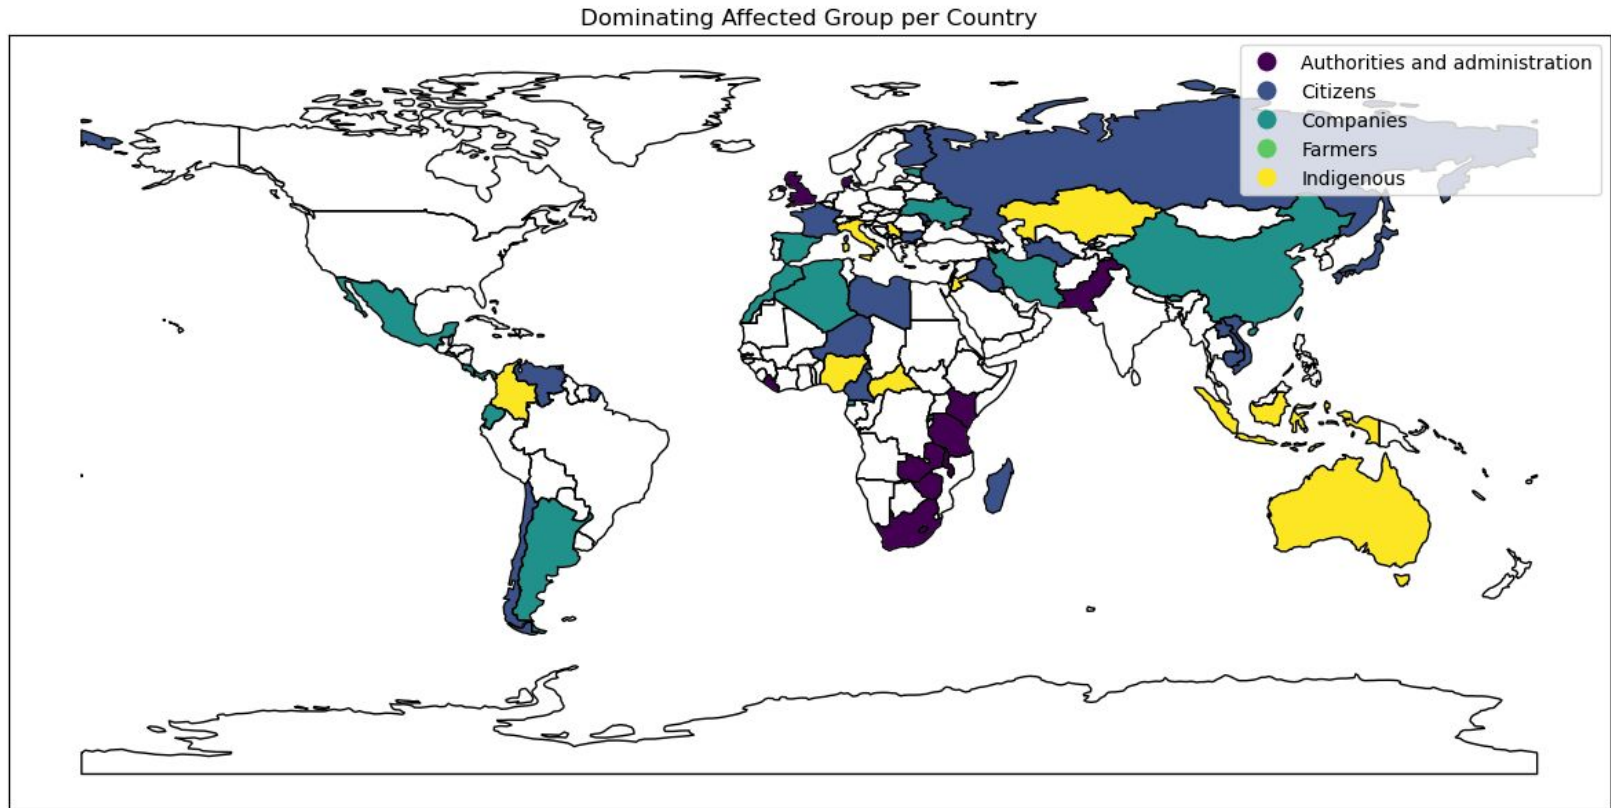

# Affected Group: Abundance

# Affected Group: Development over Time

## Affected Group: Dominating Goal per Country

# Limitations and further steps

- Some abstracts were not provided in a sufficient manner, there were empty or only contained a sentence, which was not sufficient for the analysis.
- Further since the translation to english was done using deepl pro, translating at least from spanish and french to english, there might still appear non-english phrases in the english abstracts.
- The Clustering method used hard clustering, which restricts each policies being mapped to one cluster. Weak clustering, where several categories could be mapped, would maybe make more sense for mapping the goal, instrument and affected group.
